Battery Brace V2

I revised the earlier post for a bracket to stabilize the battery. Bolts to the fuselage via the ballast screw hole. A Velcro tab on the end of the brace, Velcro tab on the back of the battery keeps it secure. I added additional holes and sized them for tapping with a 5mm tap. Brace can be moved to adjust cg. I printed this version in white as it makes it easier to see the holes through the ballast screw hole. .STL file attached below. Weighs 11 grams, can be cut shorter depending on installation and gear.

See post 347 for original.
