Convert_to_ETHOS_Bmp.exe

A simple utility to convert and use your images on the FrSky ETHOS OS in 2 clicks

If you are struggling :

- to find the right image format,
- to find the right naming rules,
- to transfer images to the right location on the SD card,

then this utility is for you !

Here you will find a simple guide. For more information go to
<https://github.com/Ceeb182/ConvertToETHOSBMPformat>

► Requirements for using this program

- Have a PC running Windows 8 or Windows 10
- Download and install the  **ImageMagick** program (on this webpage : <https://imagemagick.com/>)
- Download the  **Convert_to_ETHOS_Bmp.exe** utility ([download link](#))

Note : ImageMagick is a free software program delivered as a ready-to-use binary distribution that allows you to perform image manipulation from the command line.

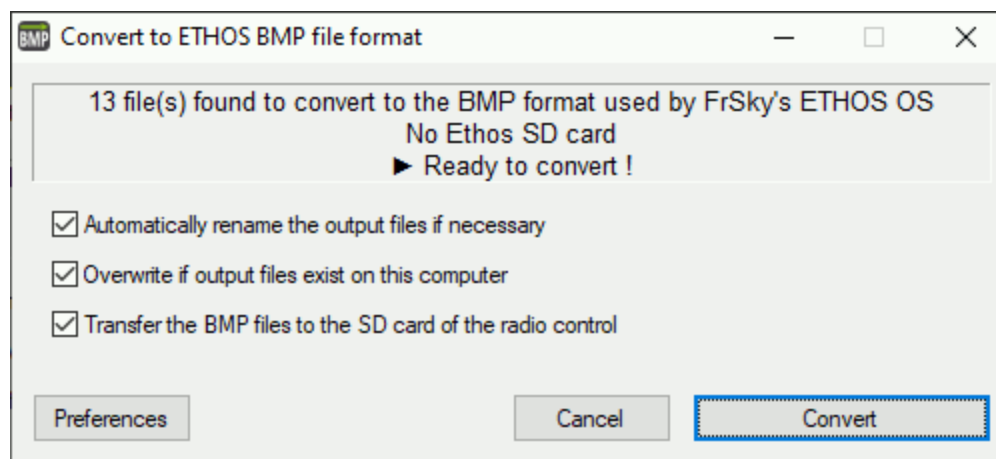

Don't worry, the "**Convert_to_ETHOS_Bmp.exe**" utility will automatically drive the ImageMagick converter !

► Quick start guide

1. Put your images in a directory (regardless of their size and file format)
2. Put the utility  **Convert_to_ETHOS_Bmp.exe** in the same directory
3. Launch by double-clicking on  **Convert_to_ETHOS_Bmp.exe**
4. Click on the "**Convert**" button
5. That's all! 🎉

The result is :

- in the "*FrSkyEthosBMP*" directory of the current directory
- automatically transferred to your ETHOS SD Card (if the SD card has been detected and the transfer option is checked)

► Supported image file formats

The image file formats currently supported are :

Other formats may be added if requested by users.
